

ABOUT US

Detectnology (UK) Ltd specialise in the sale, hire and most comprehensive maintenance support service of the world's most advanced weapon, threat and narcotic detection equipment.

Given our long standing working relationship with our country's correctional and judicial public sectors, our comprehensive advisory and supply services are totally unbiased and with complete transparency in order to meet with our clients expectation.

Detectnology (UK) Ltd are completely independent to any one manufacturer therefore & whilst our recommendations are totally unbiased, our objectives are to ensure the most appropriate screening and detection equipment are supplied to specifically suit the needs and demands of each individual application.

We endeavour to ensure the rightful products coupled with value for money are at the forefront of our advisory service and comparable to environmental expectations and performance capabilities.

Whatever the application, whatever the environmental demands, Detectnology (UK) Ltd will ensure your needs are met with the most technologically advanced screening apparatus available coupled with the most competitive affordability and proactive level of service.

SCREENING

Detectnology (UK) Ltd design, distribute and directly supply security screening equipment to an array of government sectors and industries.

In addition to manufacturing our own walkthrough metal detectors and hand held devices, we are proud to announce our distribution collaborations with the most globally renowned companies such as Adani Security, Braun International, Evolv Technologies and Gilardoni Spa, for all baggage and cargo x ray machines, as well as the latest technological advanced Transmission X Ray Body Scanners and the Innovative Mass Threat Detection Systems.

Detectnology have sourced and secured the highest quality screening products on the market today for our extensive and valued clients and now offer exclusively the BVMAX mattress scanner, designed with our country's correctional facilities in mind – this innovative new product offers the ability to screen mattresses for contraband with the high inspection capabilities available. The BV MAX will detect contraband such as Drugs, Sharps, Data storage, Mobile phones, Sim cards, SD Card and many more items.

**AVAILABLE FOR PURCHASE
OR LONG TERM HIRE**

PEOPLE SCREENING

Our Archway metal detectors are purposely designed for High Security Estates and Loss Prevention applications.

MATTRESS SCREENING

Detectnology (UK) Ltd now exclusively offers the BVMAX Mattress Scanner, designed with our country's correctional facilities in mind

CARGO/LUGGAGE SCREENING

We offer a full array of the highest quality and technically advanced x ray machines & for all applications.

I-SCAN BODY SCANNER

The I-Scan Body Scanner is exclusively available from Detectnology (UK) Ltd only and for the sole purpose of supplying our country's establishments with the undisputed and unrivalled people screening device that will combat against any/all illicit contraband and narcotic substances being illegally entered and facilitated within our prison estates.

The i-Scan DV 2nd view is generated at a different angle from the full body view. This provides the operator with the uniquely valuable benefit of two images to compare.

Just like the full body view, the settings are independently adjustable from 0.10uSv per scan to 2.0uSv. Additionally, the system can be operated as a single view unit.

DETECT HSU601 AMD

The DETECT HSU601 walk-through metal detector can be used in many aspects of security screening and offers high detection performance: its VLF (very low frequency) technology is reliable at detecting all ferrous and nonferrous metal threats.

The high-speed detection circuit can check up to 60 people/min.

The DETECT HSU601 comes with 27 Zone, multi-zone detection fields, its sensitivity can be set in accordance with the relevant safety measures. In nine clearly distinguishable detection zones, the position of a suspicious metal object is accurately displayed – using optical elements in the side panels (red LEDs) and on the electronic control box's control panel.

CELLSENSE POLE

The Cellsense portable security pole is an entirely passive unit that is the most effective mobile phone detector currently on the market, capable of detecting mobile phones which are switched off or broken down in to smaller parts.

The Cellsense pole detected small mobile phones that had been digested so there is no health and safety concerns when scanning overtly or covertly.

The Cellsense Pole is ferromagnetic detection system so it will not false alarm on silver coins or other non ferrous metallic objects.

Its unique design means that it can be deployed very quickly as a freestanding portable unit or as a wall mounted unit, with its rechargeable internal battery packs.

EVOLV EDGE SYSTEM

Evolv's Edge™ is the first system purpose-built to screen people for mass casualty threats while they pass through at walking speed.

It is designed for a wide range of deployment scenarios with intuitive directions for the visitor and automated detection results for the security officer.

Edge is ideal for high throughput environments with very limited divestment of personal items. The configuration is flexible and relocatable, allowing for deployments in many different locations and access points using different operational approaches.

The Evolv Edge™ Threat Detection System features include: Electro Optical Camera, Positive ID of Individual Alarmed, Facial Recognition, and many more.

BV6045

The BV6045 is designed for X-ray inspection of different objects revealing items, materials and substances that are prohibited for import/export or differ from the declared content.

The X-ray baggage system BV6045 provides the effective inspection of mail, hand-held baggage, luggage and other items.

The BV6045 allows identification of weapons, explosives (including plastic explosives), drugs, primers and dangerous objects, which are safety hazard by identification of substances with effective atomic number.

Dual energy imaging of the system with automatic color coding of materials having different atomic numbers helps screening specialists to easily identify dangerous objects inside any parcel.

BV100100TB

The BV100100TB was specially designed for customers requiring the inspection of baggage and small cargo without opening them.

The BV100100TB X-ray baggage security system is a very convenient and effective solution for places where there is a need of control of heavy load and parcel. This X-ray machine has an easy loading design with its lower deck pallet of just 30 cm.

The BV100100TB X-ray baggage scanner will be optimal solution for customs facilities, airports, logistics companies and parcel services or wherever security screening of heavy packages is required. It guarantees small footprint, high throughput and effectiveness of screening process.
